## Education:

---

Imperial College London

2018 - 2022

MEng Electronic and Information Engineering (Computer Engineering)

Grade 2:1

- Optimisation
- Probabilistic Inference
- Deep learning
- Mathematics for Machine Learning
- Probability & Stochastic Processes
- Decentralised Finance
- Signal Processing & Machine Learning for Finance

Wembley High Technology College

2010 - 2017

- A-Levels: Mathematics (A\*), Further Mathematics (A\*), Physics (A), AS-Economics(A)

## Relevant Work Experience:

---

Aspect Capital, Quant Researcher, Execution Research

May 2022 - Dec 2021

- Aspect, trying to diversify it's business has shifted it's focus toward higher frequency strategies, I was an initial developer/researcher of a greenfield build of KDB infrastructure tasked with producing code that could seamlessly aggregate tick data into higher frequencies (1-5 Mins)
- Focused on statistically cleaning quote/trade data for Futures, FX, FX forwards, Indices & LMEs, applying asset class specific transformations to serve research teams with high quality data.
- I had autonomy as to the direction of our infrastructure, and we made great strides in speed of data retrieval, using creative methods for partitioning data on disk, as well as structuring our KDB processes to enhance freedom of usage for researchers playing in the sandboxes we provisioned
- Understanding market microstructure was paramount, as the intricacies of different asset classes needed to be understood to build great software/statistics. My implementation of how we apply adjustments to futures given a roll schedule; how calculating a better mid price using volume weighted medians for aggregation in certain asset classes or spinning up dashboards to analyse the distribution of quotes/volume at different times of the day for Algo development are examples of my work

Aspect Capital, Investment Solutions & Quant Research Intern

March 2021 - Oct 2021

- Notable projects: Built a simulation environment for the **Investment Solutions** team in **Python**, integrated with **PowerBI**. It applied various **vectorised** methods to transform the PnL timeseries input into key statistics (**VaR**, **CARR**, **Drawdowns** etc) and graphical visualisations in an **interactive dashboard**.
- Developed a low touch framework for **multivariate regression**, enabling colleagues to run regressions of macroeconomic variables against returns without looking at any code (**Python**, **SQL**).
- Built intraday reporting tools for the **Volatility Research** team in **MATLAB** which attributed PnL to **first & second order Greeks**, granting a more thorough understanding of the underlying market dynamics affecting our positions.
- Gained familiarity with the nuances of option pricing as well as experience with productionising code (**Jenkins**, **Docker**, etc)
- Worked with **Systematic Global Macro** researchers to prepare a signal for a **research review**, this is IP sensitive so no details for you!

Tudor Investment Corp, Quant Risk Analyst

July 2019 - Sept 2019

- Developing a range of tools for the Risk team in Python (Significant Bloomberg API use) used by ~10 people across £10B AUM
- Acted as Full Stack Developer managing successful firmwide deployment across business (2k lines of production code live)

- Aiding traders in performing market analysis by providing statistical analysis and data visualisation to their workflow

## **Bloomberg, Global Data Analyst, Economics**

**Sept 2017 - Sept 2018**

- Carrying out data analysis within **Python**, using Pandas/NumPy/Matplotlib
- Created a script used in monthly meetings to provide insights into stale tickers
- Data manipulation within **Excel/VBA** and internal Bloomberg tools for parsing data
- **100%** of client queries answered within Service-Level agreement time

## **Other Experience:**

---

### **Jane Street, Electronic Trading Competition**

**October 2020**

- Developed a novel trading strategy in a simulated market maintaining top 10 PnL rank... It all went wrong when I replicated code without changing the trade direction, causing me to buy a certain instrument without selling, incurring roughly 300k of debt. I have learned my lesson!

### **IMC, Quantitative Trading Workshop**

**October 2020**

- Learned the basics of Option theory and implemented a few interesting strategies, including delta-one hedging

### **Facebook, Analytics Academy 2020**

**October 2020**

- Performed basic statistical analysis to discover insights about user habits from multiple datasets using Python, (NumPy, Pandas, etc), and present these to a panel at Facebook

### **Citadel, Trading Simulation Challenge**

**November 2020**

- A comprehensive introduction into the roles of a hedge fund and market maker; challenges included manual market making to get to grips with the concept and then an automation challenge in Python

## **Projects:**

---

- Built a **MIPS1 CPU simulator (C++)**, a **C90 to MIPS Compiler (C++)** and a **C90 to Python translator (C++)**
- Built the backend (**RESTful API in Python**) of an app for identifying & aiding the recycling of rubbish on the street, **winning the 2019 Google BGN Hackathon**
- Developed real-time traffic sign detection software with a **Xilinx PYNQ-Z1 FPGA**, using **Vivado HLS & C**

## **Skills and Interests:**

---

- Proficiency in **KDB, Python (PyTorch, NumPy, Pandas, Matplotlib, etc.), C++, C & Arm Assembly**
- Frequently practice Judo (Brown belt), competing regularly in national competitions
- Member of the **Amos Bursary** which aims to enhance the professional careers of young black men through the provision of knowledge alongside academic, cultural and professional events
- Lover of improving health through exercise; level 3 Personal Trainer, Spin cycle instructor, strength & mobility instructor teaching classes multiple times a week after work
- Lover of all music!! This includes RnB, Grunge, House, Soulful house, Rock, Neo-Soul, Jungle, DnB, Funk, etc... Ask me for a Spotify playlist :)
